Projects

Theater Inventory Database System	CSDS 341: Intro to Database Systems
--	-------------------------------------

- Designed and implemented a relational database system to manage a theater troupe's inventory, including costumes, props, and shows
- Created a normalized SQL schema with clearly defined primary keys, foreign keys, and integrity constraints to enforce data consistency
- Wrote and tested complex SQL queries involving multi-table joins, aggregations, and nested subqueries to answer realistic business questions
- Built a Python application and command-line interface to interact with the database, process user input, and execute parameterized SQL queries
- Implemented database initialization and population scripts to load structured sample data for testing and demonstration
- Documented system design decisions, schema structure, and query logic in a comprehensive final report
